                                                                                                                                                                                                                                                                                                                                                                US-10-021-811-36 (1-206) x AAC57336
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box homeotic/homeodomain/homeobox/MADS, homeodomain zipper, LIM domain, AP2 and ERBBS, zinc finger domains of type 2 Cys2His2, CCAAT box elements and wron
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 862

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
  The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic helix-loop-helix zipper, LIM domain, AP2
                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynuclectide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide
                                                                                                                                                                                                                                                                                                                         Claim l; Pages 649-650;

                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box homeotic/homeodomain/homeobox/MADS, homeodomain zipper, LIM domain, AP2 and EEBBs, zinc finger domains of type 2 Cys2His2, CCAAT box elements
                                                                                                                                                                                                                                                                                                                                     Sequence 673
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Page 131; 747pp; English.

                                                                                                                                                               The present sequence is Arabidopsis thaliana transcription factor, CC G1324 cDNA. The transcription factor is used for altering a plant's CC biochemical characteristics. The transcription factor may be used to calter the structure and developmental characteristics of plants such as cybean, wheat, corn, potato, cotton, rice, oilseed rape, sunflower, CC alfalfa, sugar cane, turf, banana, blackberry, blueberry, strawberry, craspberry, cantaloupe, carrot, cauliflower, coffee, cucumber, eggplant, CC grapes, honey dew, lettuce, mango, melon, onion, papaya, peas, peppers, CC pineapple, spinach, squash, sweet corn, tobacco, tomato, watermelon, CC pineapple, spinach, squash, sweet corn, transcription factors are CC key controlling elements of biological pathways and altering expression CC levels of 1 or more transcription factors can change entire biological pathways in an organism. Therefore manipulating transcription factor CC levels in plants offers great potential in agricultural biotechnology CC for modifying a plant's traits. Transcription factor CDNA is useful in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
         The invention relates to 1 of 232 isolated or recombinant polynucleotides encoding an Arabidopsis thaliana transcription factor, their variants, complements, fragments, or related polynucleotide with 31% to 95% sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered phenotype as compared to a wild-type or reference plant, or the plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 22-AUG-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC exhibits ectopic expression or altered expression of one or more genes CC associated with a plant trait as compared to a wild plant. Also included CC are a transgenic plant comprising the polynucleotides, a computer CC readable medium having stored sequence information, and identifying a CC homologue sequence from a database comprising plurality of known plant sequences comprising inputting sequence information. The isolated or CC 464 fully defined sequences given in the specification. The isolated or CC recombinant polynucleotide is used for producing a plant having a CC modified trait, the method comprising selecting a polynucleotide that CC encodes a polypeptide or an antisense nucleic acid, inserting the CC polynucleotide or antisense nucleic acid into an expression vector, CC introducing the vector into a plant or a cell of a plant to overexpress CC plant, and selecting for a modified trait (e.g. increased CC production of agriculturally useful proteins or metabolic chemicals, pest tolerance, environmental stress response (e.g. drought), microbial CC disease resistance, herbicide resistance, seed and fruit yield, growth cCC recoding an A. thaliana transcription factor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś
       The invention relates to 1 of 232 isolated or recombinant polynucleotides encoding an Arabidopsis thallana transcription factor, their variants, complements, fragments, or related polynucleotide with 31% to 95% sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered phantotype as compared to a wild-type or reference plant, or the plant exhibits ectopic expression or altered expression of one or more genes associated with a plant trait as compared to a wild plant. The isolated or combinant polynucleotide is used for producing a plant having a commodified trait, the method comprising selecting a polynucleotide that commodes a polypeptide or an antisense nucleic acid, inserting the color polynucleotide into a plant or a cell of a plant to overexpress for vector, comprising the vector into a plant or a cell of a plant to overexpress components of the polypeptide or antisense nucleic acid, thereby producing a modified component of agriculturally useful proteins or metabolic chemicals, components to environmental stress response (e.g. drought), microbial contacts and flower sensescence and many other traits listed in the specification). The present sequence is one of the 232 polynucleotides contacts.

                                                                                                                                                                                                                                                                       The invention relates to nucleic acid molecules (AAH87645-AAH88116) the correspond to all or part of a mRNA molecule expressed in plant oil gland cells, especially peppermint and plant oil glands that produce terpenoid essential oils and resins. The nucleic acids are useful for genetically mapping a plant genome for genes expressed in plant oil gland cells and to suppress (for example by antisense suppression) or enhance their expression (for example by genetically transforming a plant cell with a replicable expression vector that expresses one or moroteins naturally expressed in plant oil gland cells). The nucleic acid are also useful for recombinant expression of plant oil gland proteins required for terpenoid essential oil and/or resin production in bacteri and/or yeast cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant.
                                                                                                                                                                                                                                                                    New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                    Wood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Plant; transcription factor; gene expression; eucalyptus; pine; poplar; sweetgum; teak; mahogany; bZIP; G-box binding factor; basic helix-loop-helix zipper; homeotic; homeodomain; homeobox;

CC This is the sequence of Arabidopsis thaliana ecotype C24 cDNA CC encoding the stress-related protein AtMYB2 (see AAY05831). The CC cDNA was obtained by RT-PCR of anaerobically induced root RNA CC derived from ecotype C24. The inventors have demonstrated that a CC capable of inducing the expression of stress-related genes in plant CC capable of inducing the expression of stress-related genes in plant CC cells in response to stress situations. The MYB2 protein encoded CC by the AtMYB2 gene is useful for the purposes of inducing or repressing the expression of plant-expressible genes that are CC involved in the plant's response to anaerobic stress, flooding CC stress, cold stress, dehydration stress, drought stress, flooding CC stress or salinity. The stress-related gene, such as the CC alcohol dehydrogenase Adhl gene, is transactivated by the MYB2 CC polypeptide by virtue of the presence of at least one copy of a CC cis-acting regulatory sequence, in particular a MBS-1 (Myb binding CC site) motif and/or a GC-motif and/or a GC-motif and/or a G-box-1 motif and/or a GC-motif and/or a G-box-1 motif and/or a GC-motif and/or a GP-box-1 motif and/or a GC-motif and/or a GP-box-1 motif and/or a GC-motif and/or a GP-motif and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Dennis ES,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Altering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22; Page 72-74; 119pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box homeotic/homeodomain/homeobox/MADS, homeodomain zipper, LIM domain, AP2 and ERBES, zinc finger domains of type 2 Cys2His2, CCAAT box elements and MYB.
                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 389 BP; 112 A; 102 C;
